BIO-MECHANICAL EXAM & ORTHOTIC INFORMATION

(Please read carefully)

Patient Name: _____ Account: _____

Many of the causes of foot discomfort are due to, limited motion, muscle, or ligament strain. Weak foot structure causes foot discomfort when the bones and joints cannot function correctly and over time develop pain.

The examination of the structure (bones and joints) and the function (muscles, ligaments, and tendons) of the foot and ankle are called a BIO-MECHANICAL EXAMINATION. The biomechanical examination is the foundation upon which your prescription orthotic devices will be built. Below is a list of what is included in the examination and the construction of your orthotics.

BIO-MECHANICAL EXAM:

1. Range of motion evaluation
2. Scanning Procedure
3. Orthotic & lab fees

TOTAL FEES:

INITIAL PAIR	**$400.00**
WARRANTY	**$40 for pediatric orthotics only**

Note: X-rays, future examinations, and further testing if necessary are not included in the biomechanical examination or cost of the device. This device (orthotic) is non-refundable.

In the past, we have found that many insurance companies do not provide complete coverage for foot orthotics; many find them not medically necessary. Participation in your plan or quoted benefits are NOT a guarantee of payment. Payment is subject to the terms of your policy and can only be determined at the time the claim is processed. **By signing below you are accepting responsibility for the entire cost of the device regardless of quoted benefits.** ***Orthotics are a custom device, upon scanning, you are accepting full responsibility for the device.***

If for any reason your insurance carrier denies the device, you agree to pay the entire balance or any balance remaining, this includes any deductible and or denial of the device.
